

▶ Cliplight's New Super Seal Total Offers 4-in-1 Functionality

Cliplight Manufacturing Co., a leading HVACR aftermarket tool manufacturer, has introduced Super Seal Total, the industry's first four-in-one product that combines a moisture eliminator; acid preventer; UV-leak detector; and micro-leak sealer for the prevention and detection of common commercial and residential air-conditioning/refrigeration system corrosion and leak problems.

Super Seal Total is the next generation of Cliplight's renowned classic Super Seal product line of ACR sealants for micro leaks. Like classic Super Seal ACR, HVACR and Commercial sealants, Super Seal Total 1 (for systems up to 1.5 tons) and Super Seal Total 2 (for systems 5 tons and over) all come in a vacuum-packed can with a charging hose and are injected into the LP-service port of an operating ACR system.

While the original Super Seal is recommended for sealing undetectable or hard-to-reach micro leaks, Super Seal Total is a four-in-one preventative-maintenance product designed for systems before a leak occurs.

Another new series item is Super Seal Total Auto, offering the same four-in-one product strategy for the mobile A/C systems of contractors' auto/truck company fleets.
